

Pavan Sista

pavansista97@gmail.com | +1 819-919-0940 | portfolio.com | LinkedIn.com

Skills

Development: C#, Microservices, LINQ and ORM, T-SQL, React, Node.js, MongoDB, OAuth 2.0

Testing & Observability: XUnit, integration/unit testing, TDD, Elasticsearch.

DevOps & Deployment: Azure DevOps, CI/CD Pipelines, Docker, Kubernetes

Experience

IT Specialist IV, NB Power – Fredericton, NB

Mar 2021 – Present

- Developed fast, scalable RESTful APIs and **GraphQL** endpoints using **Hot Chocolate** with DTOs, leveraging **LINQ**, **asynchronous** programming, and robust data modeling with a component-based design approach.
- Architected apps (**100k Lines**) with ASP.NET MVC and **@Blazor** Frameworks following **Clean Architecture**, **Module Loading** and best software engineering practices, setting technical standards for the team.
- Spearheaded **Azure DevOps** Migration, CI/CD (Git and Release Branching workflow) with **critical acclaim**.
- Led **hybrid cloud** and on-premises integration using secure gateways and service connections, implementing **SSO** authentication with **OAuth 2.0**, enterprise identity platforms, and **Kerberos**-based security.
- Enabled **cross-functional collaboration** with Data Analytics, SAP, and Cybersecurity teams by developing **code-based** solutions that improved integration and workflows.
- Designed and executed **soft launch** deployment strategies for a critical enterprise application, utilizing **phased rollouts**, **feature-controlled exposure**, and real-time monitoring to validate system stability and ensure zero-disruption production deployment.

Junior Software Engineer, AbhiBus India LTD. – Hyderabad, India

Oct 2018 – Aug 2019

- Led the **rapid modernization** of applications from Java Struts to the **MERN stack** (Node.js, React, MongoDB), delivering the solution within a tight turnaround timeframe.
- Established **testing standards** during the Java-to-MERN migration, implementing integration and unit tests to validate business logic and API contracts across services.

Projects

DER Registry - Emerging Markets

- Large-scale registry application using a **code-first** approach with a **layered architecture**: Core - Controllers - Repository - Application Logic - UI. This significantly reduced **technical debt**.

Performance Management Form - Human Resources

- A critical application which contains sensitive info, I designed a soft go-live strategy with feature toggles, predefined success metrics, issue tracking, and hotfixes.

Risk Register - Enterprise Risk Management

- Implemented a rigorous testing strategy including unit tests (xUnit), API integration tests, regression testing, user-centric UI/UX with enhanced usability, performance, and overall **user retention**.

DevOps Setup - Custom App Support

- Designed the **branching strategy** and CI/CD templates for all .NET applications across the organization. Produced technical design documentation, workflows, and supporting materials, and **led the change**.

Education

Bishop's University – MS in Computer Science

Feb 2021

Jawaharlal Nehru Technological University – BS in Computer Science

Jun 2018

Microsoft Certified – AZ-204 Azure DevOps Developer Associate

May 2025

AXELOS Certified – ITIL (IT Service Management) Foundation

May 2022
